

Curriculum Vitae

João Neves Silva

PERSONAL DETAILS

Name: João Manuel das Neves Silva

Marital Status: Married, 3 daughters

Address: Rua de Ceuta, 23 1º A
2795-058 Linda-a-Velha, PORTUGAL

E-mail: joaonevessilva@gmail.com

Work Address:

CE3C - Centre for Ecology, Evolution and Environmental Changes

Climate Change Impacts, Adaptation & Modelling research group

Faculdade de Ciências da Universidade de Lisboa (FCUL)

Campo Grande, 1749-016 Lisboa, PORTUGAL

Building: C1, Office: 1.4.05

Phone: +351 217500000 ext: 21423

E-mail: jmdsilva@fc.ul.pt

ACADEMIC QUALIFICATIONS

Ph.D., 2005, *Forestry*, “*Mapping Burned Areas in Tropical, Temperate and Boreal Regions Using Remote Sensing Data from SPOT 4 – VEGETATION*”, Department of Forestry, School of Agriculture, Technical University of Lisbon, Portugal.

Master, 1999, *Applied Mathematics*, Department of Mathematics, School of Agriculture, Technical University of Lisbon, Portugal.

Graduation, 1996, *Forestry*, Department of Forestry, School of Agriculture, Technical University of Lisbon, Portugal.

CAREER

February 2015 – present: *Postdoctoral Researcher*, CE3C – Centre for Ecology, Evolution and Environmental Change (Climate Change Impacts, Adaptation & Modelling research group), Faculty of Sciences, University of Lisbon, Portugal.

August 2014 – December 2014: *Postdoctoral Researcher*, Forest Research Centre, School of Agriculture, University of Lisbon, Portugal.

July 2009 – July 2014: *Research Associate*, Forest Research Centre, School of Agriculture, University of Lisbon, Portugal (funding from Ciência 2008 program, Portuguese Foundation for Science and Technology - FCT).

April 2007 – June 2009: *Postdoctoral Researcher*, Tropical Research Institute (IICT), Lisbon, Portugal. Funded by the Portuguese Foundation for Science and Technology (FCT) through the postdoctoral grant SFRH/BPD/26773/2006: “*Incorporating fire as an agricultural management tool in the mLPJ dynamic global vegetation model*”.

July 2004 – March 2007: *Postdoctoral Researcher*, Forest Research Centre, School of Agriculture, Technical University of Lisbon, Portugal.

January – June 2001: *Visiting Scientist*, Global Environment Monitoring Unit, Joint Research Centre (JRC) of the European Commission, Ispra, Italy.

July 2000 – June 2004: *Ph.D. Student*, Forest Research Centre, School of Agriculture, Technical University of Lisbon, Portugal. Ph.D. grant from the Portuguese Foundation for Science and Technology (FCT): SFRH/BD/1026/2000.

January 1996 – June 2000: *Research Assistant*, Forest Research Centre, School of Agriculture, Technical University of Lisbon, Portugal.

January – September 1994: *High School Teacher - Biology*, Escola Secundária de Miraflores, Oeiras, Portugal.

SCIENTIFIC INTERESTS

- Monitoring of biomass burning and land use/cover change by remote sensing;
- The impacts of fire and the relationship between fire and vegetation dynamics, with an emphasis on the greenhouse gas emissions to the atmosphere and on the impacts in the carbon cycle;
- The study of the human-environment relationship at the landscape scale (e.g., drivers and impacts of land use change, deforestation, natural resource management);
- The use of field spectroradiometry data as an input to models of primary productivity.

PRESENT RESEARCH INTERESTS

- To improve the understanding and modelling of the impacts of shifting cultivation, also known as slash-and-burn agriculture, in the forests and woodlands of tropical regions. The emphasis is on the role of fire in the carbon cycle and on the greenhouse gas emissions to the atmosphere from biomass burning.
- Assessment of photosynthetic activity with field spectroradiometry in Mediterranean oak woodlands, including seasonal and interannual dynamics of trees, shrubs and grasses.
- Spatio-temporal analysis of burnt area trends in Portugal using Landsat satellite data.
- To explore recent advances in UAV platforms and optical sensors, which provide unprecedented opportunities for high spatial, spectral and multi-angular near-ground Earth observations.

- The development of strategies for adaptation to climate change, at local and municipal levels.

RESEARCH PROJECTS

13. Member of the coordination work package of the project ClimAdaPT.Local (www.climadapt-local.pt), which aims to embed climate change adaptation on local and municipal planning in Portugal, mainly through the development of Municipal Strategies for Adaptation to Climate Change (2015 – present).

12. Member of the Management Committee of COST ACTION ES1309: OPTIMISE - *Innovative optical Tools for proximal sensing of ecophysiological processes* (<http://optimise.dcs.aber.ac.uk/>) (2014 – present).

11. Member of Working Groups 1 and 4 of COST ACTION ES0903: EUROSPEC - *Spectral Sampling Tools for Vegetation Biophysical Parameters and Flux Measurements in Europe* (<http://cost-es0903.fem-environment.eu>) (2012 – 2013).

10. Co-investigator, research project *Remote Sensing of Regenerating Tropical Forests in Brazil: Mapping and Retrieving Biophysical Parameter* (REGROWTH-BR) funded by the Foundation for Science and Technology (FCT), Ministry of Science, Technology and Higher Education (MCTES), Portugal (PTDC/AGR-CFL/114908/2009). The goal of this project is the development of algorithms that utilise a combination of remote sensing data to map and retrieve several biophysical parameters (e.g., biomass) of regenerating forests in the Brazilian Legal Amazon (2011 – 2014).

9. Deputy project leader, research project *Deriving Fire Intensity from MSG data*, coordinated by the Faculty of Sciences of the University of Lisbon and funded by the Joint Research Centre (JRC) of the European Commission, Ispra, Italy. The main objective of this research activity is the analysis of the Fire Radiative Power (FRP) provided by the SEVIRI instrument, onboard the Meteosat Second Generation (MSG), over sub-saharan Africa. Specifically, the analysis will focus on the spatio-temporal patterns of fire intensity in four selected protected areas and in their buffer zones (2010 – 2012).

8. Co-investigator, research project *Global VGT Burnt Area Product 2000-2007* (L3JRC), which was a consortium of four institutions: the University of Leicester, United Kingdom, the Université Catholique de Louvain, Belgium, the Tropical Research Institute, Lisbon, Portugal, and the Joint Research Centre (JRC) of the European Commission, Ispra, Italy. This project produced a multi-annual global map of burnt vegetation from SPOT-VEGETATION satellite imagery. I was involved in the accuracy assessment of the L3JRC product in Africa (2005 – 2008).

7. Co-investigator, research project *Global Burnt Area 2000* (GBA 2000), an initiative of the Joint Research Centre (JRC) of the European Commission, Ispra, Italy. The main goal of GBA 2000 was to produce a map of burned areas at the global scale for the year 2000. This map was the first global map of burned areas produced

at 1km spatial resolution and it has been used by atmospheric chemists and climate change modellers. I was responsible for the development and validation of algorithms for burned area mapping in Africa, Southern Europe and China/Siberia using satellite images from the SPOT-VEGETATION and Landsat sensors. I spent six months in the Global Vegetation Monitoring Unit of Joint Research Centre (JRC), Ispra, Italy (2001 – 2003).

6. Co-investigator, research project *Reduction of uncertainties in estimates of atmospheric emissions from fires in southern Africa*, coordinated by the Department of Forestry of the School of Agriculture, Lisbon, Portugal, and funded by SAPIENS program (33582/99), Portuguese Foundation for Science and Technology (FCT). I was co-responsible for producing and validating a high resolution map of burned areas in Northern Mozambique derived from Landsat satellite imagery, for estimating fire behaviour parameters (e.g., combustion efficiency, rate of spread, intensity) in experimental burns in Zambia and also for characterizing the spectral properties of vegetation and burned areas and monitoring the recovery of vegetation in burned areas with a field spectroradiometer. I spent two months in total in Mozambique and Zambia doing fieldwork (2000 – 2002).

5. Co-investigator, research project *Southern Africa Fire-Atmosphere Research Initiative 2000* (SAFARI 2000), coordinated by the University of Virginia, U.S.A. The objectives of the SAFARI 2000 were to study the linkages between land and atmosphere processes in the southern African region, including the estimation of pyrogenic emissions of greenhouse gases. The Portuguese participation in this project, namely on field campaigns, was funded by Luso-American Development Foundation (FLAD) and Portuguese Foundation for Science and Technology (FCT) (2000).

4. Co-investigator, research project *Fire Regional Assessment and Carbon Tracking in Arnhem Land* (SMOKO/FRACTAL), which resulted from the collaboration between the Commonwealth Scientific and Industrial Research Organisation (CSIRO), Australia, the Joint Research Centre (JRC) of the European Commission, Ispra, Italy and the Department of Forestry of the School of Agriculture, Lisbon, Portugal. The main goal was the development and test of a multi-system approach to burnt area mapping from optical, thermal and microwave satellite data. Co-responsible for estimation of combustion efficiency and other fire behaviour parameters and characterization of the spectral properties of vegetation and burned areas with a portable spectroradiometer in fieldwork (2 weeks) conducted in the Kakadu National Park, Northern Territory, Australia, and also for burned area mapping with ERS2-ATSR satellite data (1999).

3. Co-investigator, research project *Development and Testing of Algorithms for a Global Burnt Area Product from ERS ATSR-2*, funded by the European Space Agency (ESA) and the Forest Research Centre (CEF) of the School of Agriculture, Lisbon, Portugal. Responsible for developing and testing algorithms for burned area mapping at global scale with images from the satellite ATSR-2 (1998).

2. Co-investigator, research project *Fire Activity in the Guiana Shield, the Orinoco and Amazon Basins During March 1998*, an initiative of the Joint Research Centre (JRC) of the European Commission, Ispra, Italy. The

objective was the characterization of the fire activity in the northern Amazon basin and Guiana's with satellite data. Responsible for burned area mapping with AVHRR satellite imagery. My colleagues from JRC and I spent 2 weeks in Suriname, in order to capture images from the AVHRR sensor with a portable antenna. During this field campaign, we did almost real-time detection of active fires and smoke plumes based on AVHRR images, with the goal of informing the colleagues of the CLAIRE/LBA (Cooperative LBA Airborne Regional experiment / Large Scale Biosphere-Atmosphere Experiment) project about the location of those fires (1998).

1. Co-investigator, joint project *Fire Risk and Burned Area Mapping in Portugal*, established by the Portuguese Forest Service and the School of Agriculture, Lisbon, Portugal. The main goals of this project were the production of burned area maps for Portugal derived from Landsat satellite images and fire risk maps obtained by an integrated analysis of the relations among the pattern of fire incidence, topography, climate and population distribution. This information is meant to support the development of national fire prevention tools and policies. Responsible for burned area and land cover mapping at national scale with satellite imagery. The work included field validation of the satellite-based maps (1996 – 2004).

STUDENT SUPERVISOR

PhD:

Melanie Häusler (Co-supervisor), FCT PhD Programme: SUSFOR - Sustainable Forests and Products (<http://www.isa.ulisboa.pt/ensino/pd-f/susfor>) (September 2014 – present).

Master:

Diogo Pinto (Co-supervisor), Master in Forestry and Natural Resources Management, School of Agriculture: *Trend analysis of the global distribution of night-time fire counts (1996 – 2012)* (completed April 2014).

Alicia Horta (Co-supervisor), Master in Forestry and Natural Resources Management, School of Agriculture: *Spatial Determinants of the location of Burned Area Perimeters* (completed March 2013).

Sosdito Mananze (Supervisor), Master in Forestry and Natural Resources Management, School of Agriculture with University of Évora, Portugal: *Analysis of Forest Cover Dynamics in the Mecuburi Forest Reserve - Mozambique* (completed September 2012).

Graduation:

Irene Pecegueiro (Co-supervisor), Graduation in Forestry Final Report, School of Agriculture: *Spatial Patterns of Burned Area Orientation in Portugal (1990-2001)* (completed 2003).

TEACHING

Practical classes of *Remote Sensing and Image Processing* and *Fire Ecology and Management* at postgraduate level (Master in Forestry and Natural Resources), School of Agriculture, University of Lisbon, Portugal: 2009-

2010, 2010-2011, 2011-2012, 2012-2013, 2013-2014 school years. In the last two school years the two subjects were included in the Erasmus Mundus Master Course Programme in Mediterranean Forestry and Natural Resources Management (<http://www.medfor.eu/>) and classes were delivered in English.

ACADEMIC DEGREES JURY PARTICIPATION

Malik Amraoui, **Doctoral degree:** *Detection and Monitoring of Active Fires in Africa and Europe using MSG-SEVIRI Imagery*. Universidade de Trás-os-Montes e Alto Douro, Vila Real, Portugal, February 11, 2011.

Yannick Lucien Bernard Le Page, **Doctoral degree:** *Anthropogenic and climatic control upon vegetation fires: new insights from satellite observations to assess current and future impacts*. School of Agriculture, Technical University of Lisbon, Portugal, January 27, 2010.

Ana Cristina Lopes de Sá, **Doctoral degree:** *Remote sensing of burned areas in southern Africa: Contribution to reduction of uncertainty in fire incidence estimates*. School of Agriculture, Technical University of Lisbon, Portugal, March 30, 2009.

Alexandre da Cunha Pereira de Lacerda Benigno, **Master degree:** *Initial attack with aerial firefighting means: Proposed priority sectors of intervention*. Instituto Superior de Educação e Ciências, Lisboa, Portugal, March 25, 2013.

Ana Isabel da Silva Santos, **Master degree:** *Analysis of the Monchique municipality forest fire protection plan*. School of Agriculture, Technical University of Lisbon, Portugal, March 18, 2013.

Berta Lúcia Cumbane, **Master degree:** *Application of Geographical Information Systems to estimate soil natural erosion potential in Sussundenga District, Mozambique*. School of Agriculture, Technical University of Lisbon, Portugal, February 27, 2012.

Cláudia Filipa Pires de Sousa, **Master degree:** *Characterization of current post-fire management practices in Portugal*. School of Agriculture, Technical University of Lisbon, Portugal, December 12, 2011.

Joana Lisboa Brandão de Melo, **Master degree:** *Characterization of the fire regime of Guinea-Bissau. Anthropogenic influence*. School of Agriculture, Technical University of Lisbon, Portugal, May 5, 2010.

Andreia Filipa Ramos da Silva, **Master degree:** *Modelling the damages of forest fires in Portugal*. School of Agriculture, Technical University of Lisbon, Portugal, December 21, 2009.

Isabel Maria Duarte Rosa, **Master degree:** *Estimation of greenhouse gas emissions from forest fires in Portugal (1990-2008), including uncertainty and sensitivity analysis*. School of Agriculture, Technical University of Lisbon, Portugal, October 26, 2009.

Ana Margarida Grácio de Barros, **Master degree:** *Accuracy assessment of the L3JRC product in Africa for the year 2000*. School of Agriculture, Technical University of Lisbon, Portugal, September 29, 2008.

PEER-REVIEWING

- Remote Sensing of Environment
- International Journal of Remote Sensing
- International Journal of Wildland Fire
- Journal of Biogeography
- Environmental Monitoring and Assessment
- Natural Hazards and Earth System Sciences
- Sensors
- PLOS ONE
- Tropical Conservation Science

TRAINING COURSES

Project Management with SCRUM, INOVISA - Association for Innovation and Business Development, School of Agriculture, Lisbon – 12 hours (2011).

MATLAB, Technical University of Lisbon Summer School, School of Economics and Management (ISEG), Lisbon, Portugal – 15 hours (2011).

Dendroecology: applying tree-ring methods to understand forest ecological processes, by Dr. Paolo Cherubini, Swiss Federal Institute for Forest, Snow and Landscape Research, School of Agriculture, Lisbon, Portugal – 3.5 hours (2010).

Summer School: Understanding Global Environmental Change: Processes, Compartments and Interactions, Netherlands Research School for the Socio-Economic and Natural Sciences of the Environment (SENSE), Hulshorst, Netherlands – 6 days (2007).

Geographically Weighted Regression (GWR) 3.0, Department of Forestry, School of Agriculture, Lisbon, Portugal – 2 days (2007).

Methods for Conceiving and Developing Project Proposals, Sindicato dos Quadros Técnicos do Estado, Lisbon, Portugal – 30 hours (2003).

Presentation Techniques, Sindicato dos Quadros Técnicos do Estado, Lisbon, Portugal – 24 hours (2002).

Introduction to IDL Training Course, Research Systems, London, U.K. – 3 days (2002).

Environmental Management and Legislation, Nova Etapa, Lisbon, Portugal – 60 hours (2001).

Italian Language Course, Knowledge Management and Training Unit of the Joint Research Centre (JRC) of the European Commission, Ispra, Italy – 30 hours (2001).

Introduction to ArcView GIS, ESRI Portugal, Lisbon, Portugal – 3 days (2000).

CONSULTING EXPERIENCE

Remote sensing and GIS expert, **Geosciences Department, University of Évora, Portugal**. Land cover change mapping in salt marshes and shore erosion rate estimation in the coast of Alentejo, Portugal, derived from aerial photographs (September 2003 – April 2006).

Remote sensing and GIS expert, **SIQuant, Lisbon, Portugal**. Land cover map derived for the territory of Portugal from Landsat 5 TM imagery. The map was ordered by the Portuguese Paper Industry Association (CELPA) and used for stratification of a national forest inventory (May – August 2005).

Forester, **WS Atkins Portugal, Lisbon, Portugal**. Participation in six Environmental Impact Assessment (EIA) processes; co-responsible for the ecology component – impacts on fauna and flora (July 2001 – September 2004).

LANGUAGES

Portuguese: mother tongue.

English: good level of reading, writing, speaking.

ADMINISTRATION

Organization of the CEF/CEABN (Centro de Estudos Florestais/Centro de Ecologia Aplicada Prof. Baeta Neves) seminars: <http://www.isa.ulisboa.pt/vida-no-isa/destaques/seminarios/cef-ceabn>

OUTREACH ACTIVITIES

Guided visits of the university campus for school groups from the following middle, primary and nursery schools: Escola Básica Integrada de Miraflores (Algés, Oeiras), Escola Básica Raul Lino (Alcântara, Lisboa), Jardim de Infância Chiquinha (Alcântara, Lisboa) (2009-2010, 2010-2011 e 2011-2012 school years).
